

we bring clarity to chaos — turning uncertainty into informed action

Founded: 2025

Stage: MVP

Industry: Climate Intelligence

Market size: Environmental consultants & green architecture firms represent a multi-billion dollar market. Our beachhead starts in Israel (~\$2.1B, 10% penetration), expands to Germany (~\$7.5B, 10%), and scales across the EU (~\$14.6B, 5%) — together unlocking over \$24B by 2030.

Pilot opportunities: We already work with 6 design partners in Israel — leading environmental consultants and green architects — and we are actively expanding collaborations with additional partners to validate and refine our platform.

Current Status: as we achieved early recognition, winning the Lior Boker Hackathon, joining ClimateLaunchpad, and receiving support from Google and the Darom Innovation Center. We are developing our MVP with active design partners and preparing for pilot programs in Beer - sheva region and Tkuma.

CHALLENGE

Climate change is accelerating, yet most organizations lack the tools to assess site-specific risks. Traditional consulting is slow, costly, and fragmented, leaving planners without timely insights to comply with regulations or protect assets.

SOLUTION

CLIMFO transforms complex climate risks into clear, site-specific insights. Our AI platform delivers real-time scenarios, tailored guidance, and actionable resilience strategies, empowering planners and consultants to make informed, adaptive decisions with confidence.

MARKET

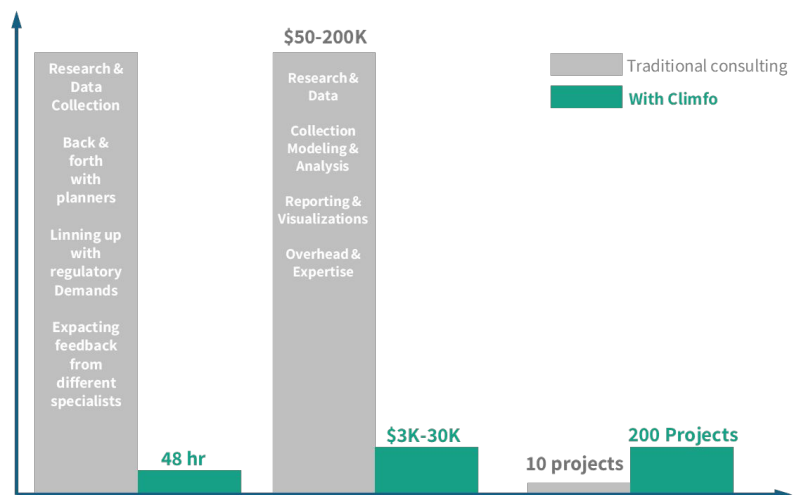

We target environmental consultants and green architects, driven by regulations like SI 5281, EPBD, and CSRD. We replace costly \$50K-\$200K projects with a \$3K/month seat model, starting in Israel (10% share) and scaling to Germany and the EU, a multi-billion dollar market by 2030.

BUSINESS MODEL

SaaS subscription — \$3K per seat / monthly.

VALUE PROPOSITION

- Automated Climate AI – delivers fast, accurate, site-specific insights in hours, not months.
- Cost-effective – replaces \$50K-\$200K per project with scalable \$3K-\$30K per seat.
- Capacity & Actionability – from 10 to 200 projects, with clear, actionable resilience guidance.

Impact

At ~10% market share in Israel, even with just 0.2 projects per customer per year, CLIMFO helps avoid ~1.9 Mt CO₂e over five years. Beyond emissions, every subscription unlocks free access for planners in high-risk regions across Africa — from floods in Sudan and Mozambique to heat stress in Nigeria and cyclones in Madagascar — strengthening resilience where it is most needed.

Bootstrapped

CLIMFO is currently developed in a bootstrapped model, driven by the founding team's expertise and commitment. This lean approach allows us to stay focused, validate market needs directly with clients, and build a resilient foundation before external funding.

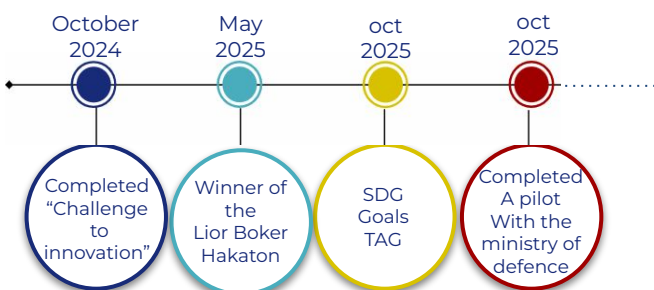

Yanin Kliro | CEO Architect and sustainability expert translating climate risks into actionable, adaptive, and spatial strategies. 10+ years of experience

Michal Grinvald | CTO Geospatial Strategist and GIS Solutions Architect shaping AI-powered, resilient geospatial futures. 20+ years of experience.

Eli Itzhak PhD | CDO GIS Expert Digital Mapping, GIS, Geospatial Technology And Map design Expert.Spatial, Terrain and Geo-AI Analyst. 30+ years of experience

EXIT

Strong path to acquisition by climate-tech platforms, enterprise software providers, and consulting firms seeking integrated, localized climate intelligence tools.
