

Introducing the ECO-OS ESG AI Engine

Harness the Power of AI to Supercharge Your Sustainability Team.

A scalable solution to manage the constant flow of ESG demands —so you can stay focused on delivering meaningful sustainability initiatives.

ESG Teams are Overwhelmed

Sustainability teams are buried under investor questionnaires, supplier surveys, and endless data requests.

The ESG AI Engine empowers teams to spend less time chasing data or coordinating endless alignment meetings and more time driving meaningful ESG performance and measurable business impact.

Align With Frameworks

Check responses against frameworks and see suggestions for improvement.

Develop New Policies

Review KPI's and best practices from your industry to support new policy creation.

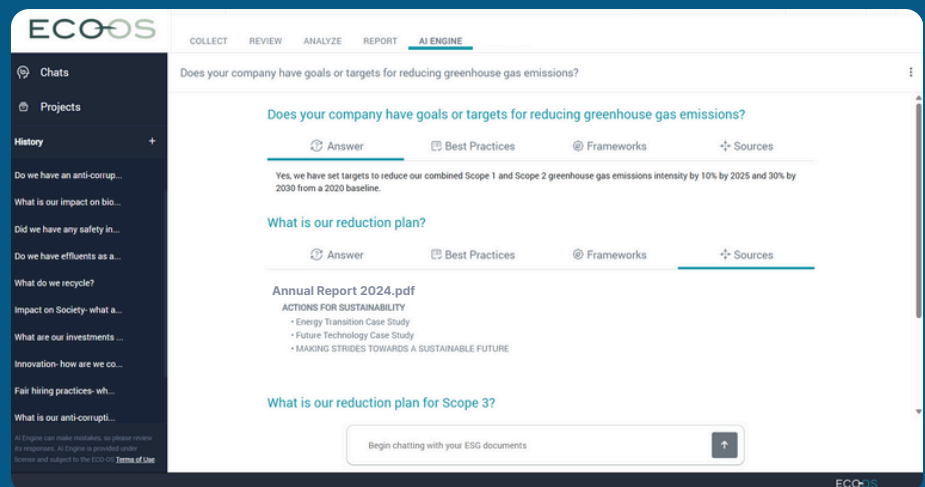

Secure by Design

Confidential, encrypted, and built for your IT and compliance standards.

How the ESG AI ENGINE Works

It starts with a question—or a full questionnaire. Whether it's an investor request, a supplier survey, or a disclosure requirement, the ESG AI Engine **pulls from your company's select documents** to generate a response.

The AI Engine **also checks against alignment** with frameworks like GRI, CDP, and IFRS, and brings in **best-practices** from your industry to strengthen the response. Ask follow-up questions to ensure your response is complete, and when it's ready, save it to a project for team collaboration, approvals, and future reuse—all without leaving the platform.

You Signed Up to Lead. Let the AI Engine Handle the Noise.

The ESG AI ENGINE

Drives Impact Through 3 Integrated Components:

Secure Document Hub

Your single point of record—secure, structured, and tailored to your company.

The Document Hub is tailored to your organization and built to scale. It includes your internal documents, public disclosures, and curated best practices—plus key frameworks like CSRD, GRI, IFRS, and SASB. This enables the AI Engine to **generate answers grounded in your actual data** and aligned with global standards. Easily drop in new and updated files so it always stays current.

The document hub is private: for your company's eyes only, ensuring consistency, accuracy, and traceability with full privacy and security.

AI Chat Interface

Query the document hub, find, draft, and refine responses on demand.

The AI Chat interface lets you ask complex ESG questions in any language and **instantly receive responses** sourced from your internal documentation, public disclosures, and relevant frameworks.

Each response can be checked for alignment with global standards and offers suggestions for improvements based on industry best practices. It also includes full citations, so you know exactly where the answer came from, ensuring **trusted, fast, and consistent information** at your fingertips.

Report Editor

A shared workspace from first draft to final approval.

The Report Editor lets you turn ESG queries into complete, downloadable reports with full transparency and shared ownership. Collaborate across teams to **develop anything from questionnaire responses to new policies and procedures**—then export polished documents, ready for investors, regulators, or internal stakeholders.

Completed projects stay accessible on the system, so other departments can reference vetted, aligned content without burdening the ESG team to start from scratch, resulting in **fewer bottlenecks, faster alignment, and broader organizational engagement in ESG**.

You Signed Up to Lead. Let the AI Engine Handle the Noise.
